During March the SID captured 10710 vehicle movements. There was a seven-day gap, 15<sup>th</sup> to 21<sup>st</sup>, in the data collection which is unexplained. The highest speed recorded was **64 mph**, between 04:55 and 04:59 on Wednesday 9<sup>th</sup> March. Eighty five percent of the vehicles passing the SID did not exceed 30 mph, the average speed was 23mph. For April I have set the SID to record vehicle movements in both directions and it will be interesting to compare the two sets at the end of the month.
